COMPANY DESCRIPTION

Surf Air Mobility Inc. is a pioneering company in the advanced air mobility sector, headquartered in Los Angeles, California. The Company operates a comprehensive air mobility platform that includes scheduled routes and on-demand charter flights, primarily in the United States. This platform is supported by SRFM's Surf OS software platform. The Company is dedicated to transforming regional air travel by bringing to market both software and electrification technology. Surf Air aims to both facilitate the development of regional point to point flight, leveraging the more than 5,000 public use airports that already exist in the U.S. as well as leverage innovative electric and hybrid-electric powertrain technologies, significantly reduce the cost and environmental impact of regional flights.

SURF AIR MOBILITY INC. (NYSE: SRFM)

Company Updates

Results: SRFM's FY25 results suggest the company is emerging from restructuring with a more stable operating base and a clearer path to growth. Full-year revenue of \$106.6M met the company's raised outlook, while adjusted EBITDA loss improved to \$41.7M on better airline operations, a stronger charter mix, and continued execution under the transformation plan. Net debt also declined 47% y/y to \$74M, supported by capital actions and convertible note conversion. In 4Q25, SRFM reported revenue of \$26.4M and an adjusted EBITDA loss of just under \$8M, both within guidance despite pressure from exiting unprofitable scheduled routes. Overall, the quarter reinforced continued progress in the transformation heading into 2026.

Air Mobility: Air Mobility improved in 4Q25, with On Demand revenue up 36% y/y, while scheduled revenue declined due to the continued exit of unprofitable routes. On Demand revenue increased 36% y/y, driven by better sourcing discipline, a mix shift toward longer-haul trips with larger aircraft, and early BrokerOS traction. Improved controllable completion and on-time performance also suggest the airline is becoming a more reliable platform heading into FY26.

Software: SRFM continued to advance SurfOS in 4Q25, with the story moving closer to commercialization. In 2025, the company directed \$26M toward SurfOS, fully deployed BrokerOS internally, launched its Palantir-powered scheduling tool, and signed LOI and beta partnership agreements with multiple Part 135 operators. With BrokerOS, OperatorOS, and OwnerOS now introduced, we view software as an increasingly credible second leg to the story, with initial SurfOS revenue expected in 2026.

Electrification: SRFM's electrification strategy is broadening beyond the legacy Cessna Caravan program and is now better framed around enabling electric aircraft adoption across regional aviation. The new BETA Technologies partnership is the clearest proof point, positioning SRFM as a potential operator, service, and infrastructure partner as electric aircraft enter commercial use. In our view, that shift matters because it moves SRFM toward more partnership-driven, capital-light participation in airline electrification, while the Caravan program maintains its longer-term optionality, most likely through a future JV partnership.

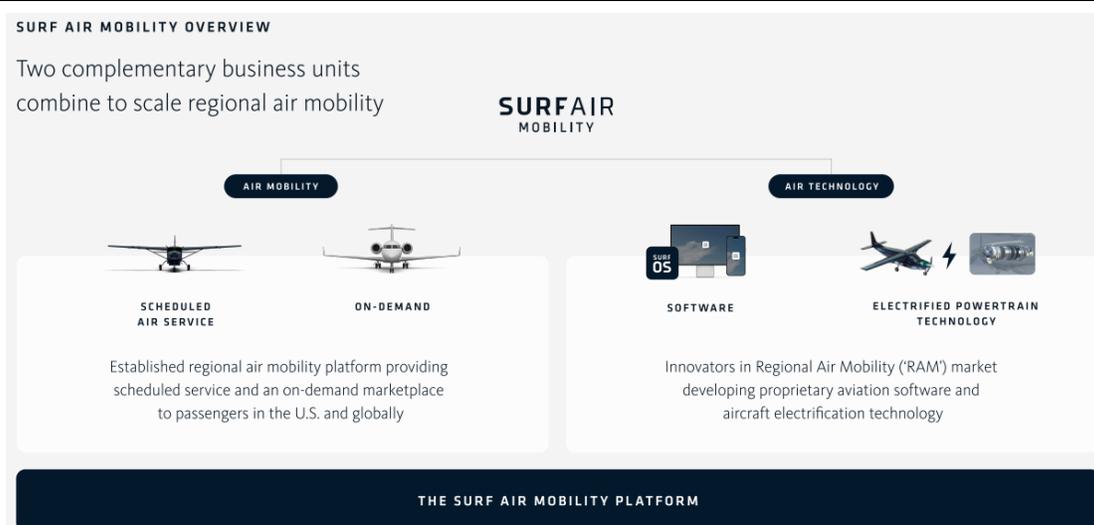

Outlook: For 1Q26, management expects revenue of \$24M to \$26M and an adjusted EBITDA loss of \$15.5M to \$13.5M, reflecting higher On Demand charter revenue, improved scheduled load factors, and the continued impact of exiting unprofitable routes, with no SurfOS revenue contribution assumed. For FY26, the company guided revenues of \$128M to \$138M, representing 20% to 30% growth, and an adjusted EBITDA loss of \$50M to \$40M, with growth expected to be weighted toward the back half of the year as On Demand accelerates and SurfOS begins contributing revenue.

Valuation: We are using an EV/Revenue framework to inform our SRFM valuation. Currently SRFM is trading at a FY27 EV/Revenue of 1.3x compared to comps at a median of 3.4x. We are using our F26 expected Revenue, and an EV/Revenue range of 3.0x to 4.0x with a midpoint of 3.5x. This arrives at a valuation range of \$5.90 to \$8.32 with a mid-point of \$7.11.

Business Overview

Surf Air Mobility Inc. (“Surf Air”, “the Company”, or “SRFM”) is a pioneering company in the advanced air mobility sector, headquartered in Los Angeles, California. The Company operates a comprehensive air mobility platform that includes scheduled routes and on-demand charter flights, primarily in the United States. This platform is supported by SRFM’s Surf OS software platform, which is being developed in partnership with Palantir and is expected to significantly improve the efficiency and profitability of the regional air mobility market. The Company is dedicated to transforming regional air travel by bringing to market both software and electrification technology. These technological advancements are expected to underpin the Surf Air platform and support the rapid expansion of regional air mobility. Surf Air aims to both facilitate the development of regional point to point flight, leveraging the more than 5,000 public use airports that already exist in the U.S. as well as leverage innovative electric and hybrid-electric powertrain technologies, significantly reduce the cost and environmental impact of regional flights. The Company trades on the NYSE under the ticker symbol “SRFM”.

Exhibit 1: Surf Air Mobility Overview

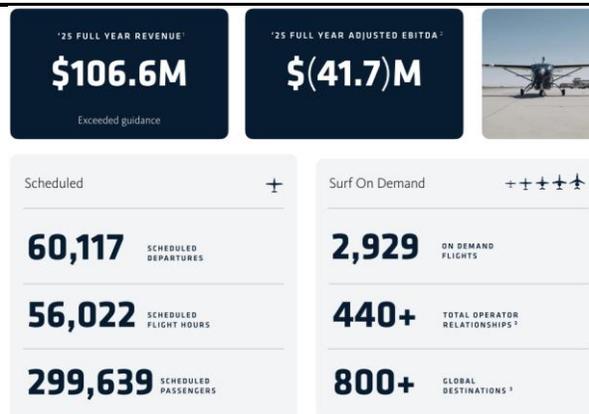

Source: Company Reports

Since 2011, Surf Air Mobility has grown to become one of the largest commuter airline in the U.S. by scheduled departures. The Company’s fleet includes a variety of aircraft, such as Cessna Caravans and Pilatus PC-12s which are integral to its operations. Surf Air Mobility’s business model is built around providing efficient, cost-effective, and environmentally friendly air travel solutions. The Company is also focused on developing proprietary software to enhance operational efficiency and customer experience, in collaboration with industry leaders like Palantir Technologies.

Surf Air Mobility’s strategic vision includes a four-phase transformation plan (see *Transformation Plan*) aimed at optimizing airline operations, recalibrating its on-demand business, commercializing SurfOS, and deploying electrified aircraft across its network. This plan is designed to strengthen the Company’s financial position, improve operational efficiencies, and expand its market presence. With a commitment to innovation and sustainability, Surf Air Mobility is poised to lead the regional air mobility market into a new era of electrified aviation.

Exhibit 2: FY25 Performance

Source: Company Reports

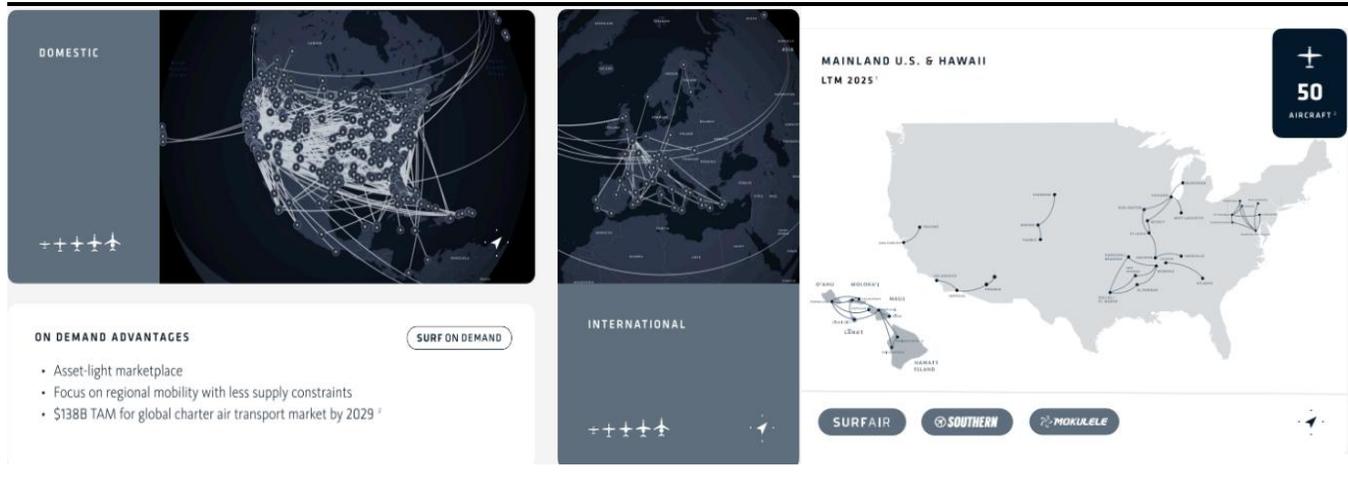

Segment Overview

Surf Air Mobility operates through two primary business segments: Air Mobility and Air Technology.

Air Mobility: This segment encompasses the Company's core operations, including scheduled air services and on-demand charter flights. Surf Air Mobility provides regional air travel solutions through its extensive network of routes across the mainland U.S. and Hawaii. The Company's scheduled air service is supported by a fleet of over 57 aircraft, which includes Cessna Caravans and Pilatus PC-12s.

In 2024, Surf Air Mobility flew over 350,000 scheduled passengers over 69,000 scheduled departures, with an additional 3,523 on demand flights. The Company also operates under the Essential Air Service (EAS) program, which ensures air connectivity for small communities and underserved markets. Once optimized, this program is poised to provide significant tailwinds to SRFM in the future. While the Company is presently exiting unprofitable routes, future tailwinds include both an increase in the subsidy cap as well as costs becoming an equal consideration when DOT is selecting air carriers. These tailwinds are expected to both increase the Company's subsidy revenues as well as increasing volumes due to Surf Air's competitive low cost positioning.

Exhibit 3: SAS, EAS, Domestic On Demand, and International On Demand Routes

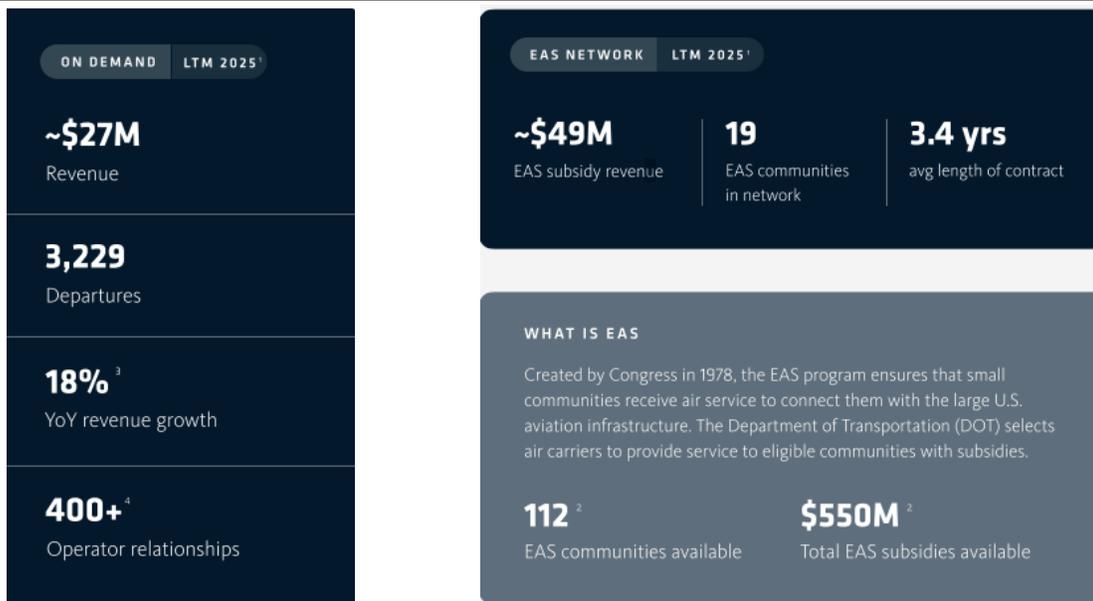

Source: Company Reports

The Air Mobility segment is integral to Surf Air Mobility's mission of transforming regional air travel. By offering both scheduled and on-demand services, the Company caters to a diverse customer base, ranging from business travelers to leisure passengers. The scheduled services provide reliable and regular connections between key regional destinations, while the on-demand charter flights offer flexibility and convenience for those requiring quicker, premium solutions for air travel. Additionally, the EAS program plays a crucial role in maintaining air service to remote and underserved areas.

The Company's strong and extensive network in Hawaii, for example, demonstrates the potential of regional air mobility. This makes Hawaii the perfect testing grounds for the Company as it further fine tunes and leverages the benefit of scale it has over competitors. Hawaii also presents an ideal market for SRFM to launch and to test electrified planes as that technology comes online.

Exhibit 4: EAS & On-Demand Growth

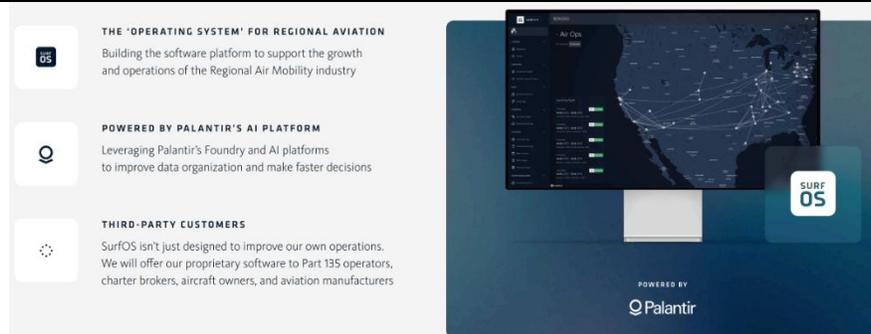

Source: Company Reports

Air Technology: The Air Technology segment is pivotal to Surf Air Mobility's long-term strategy of creating a sustainable and efficient regional air travel ecosystem. This segment focuses on the development and commercialization of electric and hybrid-electric powertrain technologies as well as the Company's Surf OS software solution that is designed to support the growth and operations of the advanced air mobility industry. The development of electric and hybrid-electric powertrains is expected to revolutionize regional air travel by significantly reducing operating costs and carbon emissions. Surf Air Mobility is at the forefront of aviation innovation, working on the certification of electrified powertrains and the deployment of electrified aircraft. The Company has also entered into strategic partnerships, including a notable collaboration with Palantir Technologies to develop advanced air mobility software solutions for the aviation industry. These technologies aim to enhance operational efficiency, reduce costs, and minimize complications for operators, brokers, and owners. It is notable that the current landscape of software available to regional operators is fragmented and outdated, leaving low barriers to entry for SRFM to capture significant market share, further aided by the over 400 relationships that SRFM already has in the regional air mobility market.

Exhibit 5: Air Technology Overview

Surf Air Mobility's partnership with Palantir Technologies is a key component of this strategy, leveraging Palantir's AI and data analytics capabilities as well as its salesforce Surf Air will be able to optimize operations and improve decision-making processes. The Company's proprietary software platform, SurfOS, is designed to support the advanced air mobility industry

Source: Company Reports

by providing comprehensive tools for scheduling, pricing, and operational management. This platform is not only intended to enhance Surf Air Mobility's own operations but also to be offered to other operators, charter brokers, and aviation manufacturers, thereby driving industry-wide improvements.

In addition to software development, the Air Technology segment is focused on the certification and deployment of electrified aircraft. Surf Air Mobility is pursuing Supplemental Type Certification (STC) for its proprietary powertrain technology for the Cessna Grand Caravan, in collaboration with Textron Aviation. This initiative aims to bring best-in-class electric aircraft to market, further solidifying the Company's position as a leader in sustainable aviation. The segment also explores joint ventures with industry leaders to pursue capital-efficient growth opportunities and accelerate the adoption of electrified aircraft.

Overall, Surf Air Mobility's dual focus on Air Mobility and Air Technology positions the Company to lead the regional air mobility market into a new era of electrified aviation. By combining operational excellence with cutting-edge technology, Surf Air Mobility is well-equipped to meet the growing demand for efficient, cost-effective, and environmentally friendly air travel solutions.

Transformation Plan

Surf Air Mobility has outlined a comprehensive Four-Phase Transformation Plan designed to enhance its operational efficiency, financial stability, and market position. This strategic plan is structured to guide the Company through a series of targeted initiatives from 2024 to beyond 2027, ensuring sustainable growth and profitability.

Phase 1: Transformation (2024)

The first phase, now complete, focused on transforming the Surf Air's foundational aspects. Key initiatives included:

1. **Improving Capital Structure:** Surf Air Mobility secured \$50 million in funding and extended the maturity of other secured debts to December 31, 2028. This move significantly strengthened the Company's financial position.
2. **Strengthening the Balance Sheet:** The Company addressed past liabilities totaling approximately \$70 million, with a targeted reductions and refinancing. These efforts have put the Company on a foreseeable path to be debt free.
3. **Leadership Enhancement:** Surf Air Mobility appointed experienced leaders across the organization, bringing decades of aviation expertise to drive the Company's strategic goals.
4. **Realizing M&A Synergies:** Following its merger with Southern Airways, the Company achieved M&A synergies amounting to approximately \$6.5 million, enhancing operational efficiencies and cost savings.

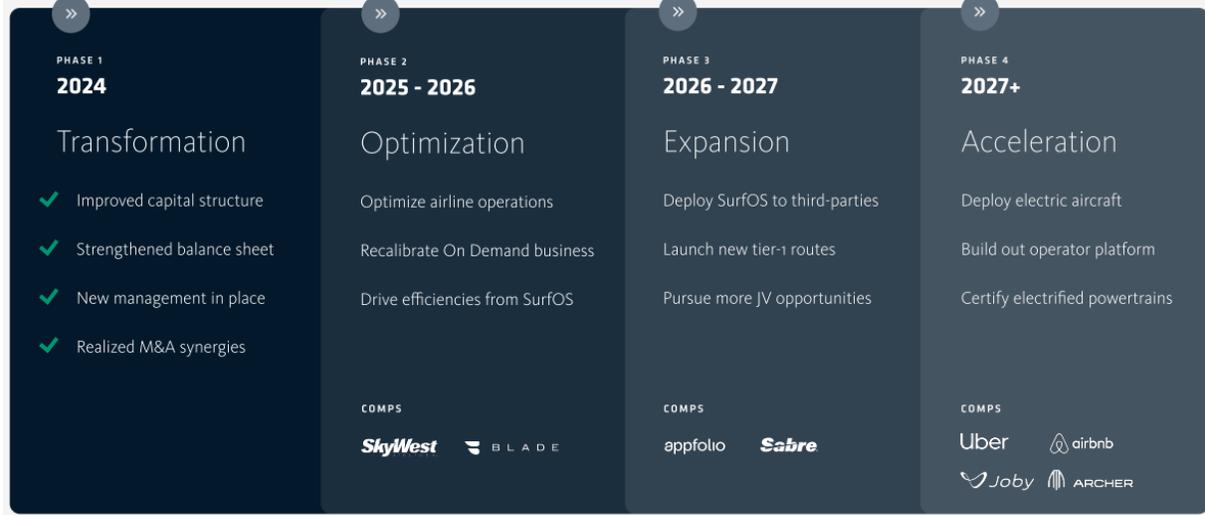

Phase 2: Optimization (2025-2026)

The second phase is now complete – Optimization - aimed to maximize the profitability of Surf Air Mobility's scheduled services and on-demand charter operations. Key focus areas included:

1. **Scheduled Service Optimization:** The Company is implementing systems and processes to measure and drive efficiencies against real-time operational and financial KPIs. Having addressed deferred maintenance backlogs, the Company has improved aircraft availability and flight completion rates. Additionally, Surf Air Mobility has exited unprofitable routes and redeploying aircraft to more lucrative markets. This strategic reallocation of assets has contributed to the generation of positive segment EBITDA for FY25.
2. **On-Demand Business Recalibration:** The Company focused on expanding its market share in the higher-margin jet category, securing inventory through advance volume purchase agreements, and pursuing international partnerships. These efforts drove revenue growth and profitability in the on-demand segment.

3. **SurfOS Implementation:** The continued implementation of SurfOS software solutions, developed in collaboration with Palantir, is expected to continue driving productivity and efficiency improvements across the organization beyond the optimization phase.

Exhibit 6: 4-Phase Transformation Overview

Source: Company Reports

Phase 3: Expansion (2026-2027)

The third phase, Expansion, is set to begin in FY 2026. This phase focuses on profitable network expansion and leveraging data-driven insights to identify and launch new tier-1 routes across the U.S. Key initiatives include:

1. **Network Expansion:** Using data-driven insights, Surf Air Mobility will quantify and qualify route attractiveness, selecting tier-1 routes for profitability using current combustion aircraft. Further margin improvements are anticipated once electrified planes are commercialized. Currently the US has ~5,000 underutilized public airports with 90% of American living within a 30-minute drive of one of these airports. This presents a perfect opportunity for SRFM to expand its network.
2. **Joint Venture Opportunities:** The Company plans to pursue additional joint ventures to capitalize on high-growth initiatives with strategic partners, leveraging its scale and market presence. JV opportunities will give the Company the ability to leverage its understanding of its markets and R&D capabilities. It is these JV opportunities that will give SRFM the advantage as it capitalizes on its electrification efforts as well as its software venture.
3. **SurfOS Marketing:** SurfOS will be broadly marketed to third-party customers, including air operators, charter brokers, and aviation OEMs, through the Surf Air Technologies LLC venture with Palantir. This initiative aims to develop revenue traction and establish SurfOS as a leading software solution in the regional and advanced air mobility segment.

Phase 4: Acceleration (2027+)

The final phase, Acceleration, is anticipated to commence in FY 2027. This phase focuses on leveraging Surf Air Mobility's platform to accelerate the adoption of new aviation technologies throughout the platform thus driving significant revenue growth and margin expansion. Key initiatives include:

1. **Certification of Electrified Powertrain Technology:** A key focus will be the certification of the Company's proprietary electrified powertrain technology for the Cessna Grand Caravan. This certification is expected to occur within the framework of a joint venture with a leading industry partner.
2. **Commercialization of Powertrains:** Post-certification, Surf Air Mobility will leverage its exclusive sales and marketing relationship with Textron Aviation to commercialize these powertrains, driving widespread adoption and market penetration.
3. **Leveraging Network Effects:** The Company will utilize the network effects of its operator platform to emerge as a category leader in regional air mobility, capitalizing on its position as one of the largest commuter airlines in the U.S. by scheduled departures.

Market Overview

The regional air mobility market is undergoing a transformative phase, driven by technological advancements, regulatory support, and increasing demand for sustainable transportation solutions. The market is expected to experience substantial growth over the next decade, with projections indicating a global market size of \$75 billion to \$115 billion by 2035. In the United States alone, the market is anticipated to reach between \$15 billion and \$22 billion by the same year. This growth is fueled by several key factors that are reshaping the landscape of regional air travel.

Technological Advancements: One of the primary drivers of growth in the regional air mobility market is the rapid advancement in electric and hybrid-electric propulsion technologies. Companies like Surf Air Mobility are at the forefront of this innovation, developing powertrain technologies that promise to reduce operating costs and environmental impact. The shift towards electrified aircraft is expected to revolutionize regional air travel by making it more efficient, cost-effective, and environmentally friendly. These advancements are not only enhancing the performance and reliability of aircraft but also opening up new possibilities for regional point to point connectivity.

Regulatory Support and Government Initiatives: The regulatory environment is increasingly supportive of sustainable aviation solutions. Governments and regulatory bodies are implementing policies and incentives to promote the adoption of electric and hybrid-electric aircraft. In the United States, programs like the Essential Air Service (EAS) ensure that small and remote communities remain connected to the broader aviation network. These programs provide financial support to airlines, enabling them to offer services to areas that might otherwise be unprofitable. Such initiatives are crucial for maintaining regional connectivity and supporting the growth of the regional air mobility market.

Market Demand and Consumer Preferences: There is a growing demand for convenient, efficient, and sustainable transportation options. Consumers are increasingly prioritizing environmental sustainability in their travel choices, and regional air mobility offers a compelling solution. The ability to provide quick and direct connections between regional destinations without the need for extensive ground transportation is a significant advantage. This is particularly relevant in regions with limited infrastructure or challenging geography, where traditional transportation options may be less viable.

Strategic Partnerships and Industry Collaboration: The regional air mobility market is characterized by a high degree of collaboration between various stakeholders, including airlines, technology developers, and regulatory bodies. Strategic partnerships are essential for driving innovation and accelerating the adoption of new technologies. Surf Air Mobility's collaboration with Palantir Technologies, for example, leverages advanced data analytics and AI to optimize operations and enhance service delivery. Such partnerships are instrumental in developing integrated solutions that address the complex challenges of regional air mobility.

Economic and Environmental Benefits: The economic and environmental benefits of regional air mobility are significant. Electrified aircraft are expected to reduce operating costs by lowering fuel consumption and maintenance expenses. This, in turn, can lead to lower ticket prices and increased accessibility for passengers. Additionally, the reduction in carbon emissions aligns with global efforts to combat climate change and promote sustainable development. The adoption of electric and hybrid-electric aircraft is a critical step towards achieving these environmental goals.

In summary, the regional air mobility market is poised for significant growth, driven by technological advancements, regulatory support, and increasing consumer demand for sustainable transportation solutions. Companies like Surf Air Mobility are well-positioned to capitalize on these trends, leveraging their expertise and strategic partnerships to lead the market into a new era of electrified aviation. The continued development and adoption of electric and hybrid-electric aircraft will be key to realizing the full potential of regional air mobility, offering economic, environmental, and social benefits.

Risks

Changes in government policies – The Essential Air Service is reliant upon government policies for rate setting and demand. Changes to government regulations could have adverse effects on the Company's business.

Loss of key partnerships – The Company is currently a part of several key partnerships to drive innovation. Any significant changes in or losses of these key partnerships could have adverse effects on the Company's business.

Unproven technology – Should the Company bring any or all of its assets to market, there is no guarantee that a profitable market will exist for those products. While we are encouraged by the current market outlook for electronic powertrains these current expectations may differ from future results.

Geographic concentration – The Company derives a significant percentage of its revenues from its Hawaiian operations. This geographic concentration makes the Company increase risk while SRFM is working to expand its offerings into the Air Technology subsegment.

Valuation

When creating a valuation for SRFM we rely on a comparative analysis. When selecting comparable companies for SRFM we note the current position of the company between a legacy passenger airline and an advanced, tech-enabled, air mobility company. Finding legacy comps is fairly straight forward, albeit limited given the small number of publicly traded comps. For tech enabled comps we had a broader number of companies to choose from that we think accurately capture the path that SRFM is on.

(3) Forward estimates as of calendar year

Source: Company reports, CapitalIQ, Stonegate Capital Partners

Due to SRFM being in the midst of its transition and without yet achieving positive EBITDA, we look further up the income statement and rely on EV/Revenue when choosing a valuation multiple. We believe this is reasonable for early-stage tech companies, the likes of which SRFM is pivoting into with the launch of SurfOS. We note that legacy comps trade at a forward EV/Revenue multiple of 2.1x at the median compared to tech enabled comps trading at 4.5x. Even when we control for ACHR in the comp set, tech enabled comps still trade at 3.4x. The total comp sets FY27 EV/Revenue trades at 3.4x with ACHR and 2.3x without ACHR. For our valuation we have selected an EV/Revenue range of 3.0x to 4.0x with a midpoint of 3.5x, which values SRFM closer to tech enabled comps. We think this is reasonable given Surf Air's launch of SurfOS, the strong balance sheet, mobility showing a clear path to becoming profitable, and the upside from partnering with companies like BETA. We expect the Company to continue re-rating towards tech enabled comps as the numerous catalysts mentioned above are realized. This values SRFM in a range of \$5.90 to \$8.32 per share, with a midpoint of \$7.11.

	EV/Revenue

IMPORTANT DISCLOSURES AND DISCLAIMER

- (a) The research analyst and/or a member of the analyst's household do not have a financial interest in the debt or equity securities of the subject company.
- (b) The research analyst responsible for the preparation of this report has not received compensation that is based upon Stonegate's investment banking revenues.
- (c) Stonegate or any affiliate have not managed or co-managed a public offering of securities for the subject company in the last twelve months, received investment banking compensation from the subject company in the last 12 months, nor expects or receive or intends or seek compensation for investment banking services from the subject company in the next three months.
- (d) Stonegate's equity affiliate, Stonegate Capital Partners, "SCP" has a contractual agreement with the subject company to provide research services, investor relations support, and investor outreach. SCP receives a monthly retainer for these non-investment banking services.
- (e) Stonegate or its affiliates do not beneficially own 1% or more of any class of common equity securities of the subject company.
- (f) Stonegate does not make a market in the subject company.
- (g) The research analyst has not received any compensation from the subject company in the previous 12 months.
- (h) Stonegate, the research analyst, or associated person of Stonegate with the ability to influence the content of the research report knows or has reason to know of any material conflicts of interest at the time of publication or distribution of the research report.
- (i) No employee of Stonegate has a position as an officer or director of the subject company.

Ratings - Stonegate does not provide ratings for the covered companies.

Distribution of Ratings - Stonegate does not provide ratings for covered companies.

Price Chart - Stonegate does not have, nor has previously had, a rating for its covered companies.

Price Targets - Stonegate does not provide price targets for its covered companies. However, Stonegate does provide valuation analysis.

Regulation Analyst Certification:

I, Dave Storms, CFA, hereby certify that all views expressed in this report accurately reflect my personal views about the subject company or companies and its or their securities. I also certify that no part of my compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed in this report.
