**COMPANY DESCRIPTION**

Burcon NutraScience Corporation is a global leader in innovative technologies for the large-scale production of high-quality, cost-effective plant-based proteins and ingredients for use in the global food and beverage industries. Burcon is a leader in the development of plant-based proteins amassing over 100 issued patents and over 80 additional patent applications. Burcon's portfolio includes pea, canola, soy, sunflower, hemp, and upcycled based proteins. Burcon is headquartered in Vancouver, BC and began trading on the TSX in 1999 under the ticker symbol "BU".

**BURCON NUTRASCIENCE CORPORATION (TSX: BU)**
**Company Updates**

**Pea Protein Commercialization:** Subsequent to the third quarter of 2025, Burcon made continued significant progress in its strategic initiatives. The Company successfully scaled up commercial production of its pea protein isolate, marking a pivotal milestone in its go-to-market strategy. This scale up was accomplished at the Company's Galesburg facility and took less than 90 days. The truncated timeframe enables Burcon to meet customer demand and unlock revenue opportunities. This pea protein market is expected to have a TAM of approximately US\$215M to US\$392M.

**Share Consolidation:** Subsequent to the third quarter, Burcon announced a share consolidation program. This consolidation will be at a 20:1 ratio and will commence on June 11, 2025. We view this as positive for the Company as it works to optimize its capital structure.

**ProMan Partnership:** In 3Q25, Burcon detailed a strategic partnership with ProMan to acquire and operate a protein production facility. This partnership, led by Burcon board member John Vassallo, involves ProMan purchasing the facility and leasing it to Burcon. This arrangement allows Burcon to maintain a capital-light position while gaining full control over the production of its entire suite of plant-based protein products. With production online in just 90 days, the Company has reiterated its revenue targets. First-year sales are projected to be in the range of \$1M – 3M, with \$10+ M revenue expected in year two. Profitability and positive cash flows are expected FY26.

**Product Commercialization:** During the quarter, the Company collaborated with Puratos to pioneer new canola protein applications, and announced a rights offering to fund production, marketing, and sales of its proteins. The Company also launched next-generation Peazazz® pea protein, now commercially produced at the Galesburg facility mentioned above, and Puratein® canola protein for egg replacement applications. Subsequent to the quarter-end, Burcon's alliance partner, ProMan, signed a purchase and sale agreement to acquire the protein production facility, and Burcon agreed to terms for the purchase and operation of the facility. The Company successfully closed a rights offering with gross proceeds of \$9.43M and launched Solatein™ sunflower protein isolate.

**Financial Overview:** In 3Q25, Burcon generated \$0.06M in revenues from the sale of its protein isolate and contract research services, compared to no revenues in the same quarter last year. The Company reported a net loss of \$1.8M or \$0.01 per share, compared to a net loss of \$2.0M or \$0.02 per share in the same period last year. R&D expenses decreased to \$0.7M from \$1.1M, while G&A expenses increased by 1.4% in the same period. The Company received \$78,000 in funding from Protein Industries Canada for the scale-up and commercialization of hempseed and sunflower seed proteins. The Company has a pro-forma cash balance of ~10.0M following its rights offering. This gives BU enough liquidity for the foreseeable future.

**Valuation:** We use a DCF Model to frame our valuation of BU. Our DCF analysis relies on a range of discount rates between 10.50% and 11.00% with a midpoint of 10.75%, which we believe accurately accounts for the size and relative illiquidity of BU. This arrives at a valuation range of \$23.85 to \$29.78 with a mid-point of \$26.40.

## Business Overview

Burcon NutraScience Corporation (“BU”, “Burcon”, or “the Company”) is a global leader in innovative technologies for the large-scale production of high-quality, cost-effective plant-based proteins and ingredients for use in the global food and beverage industries. Burcon is a leader in the development of plant-based proteins amassing over 100 issued patents and over 80 additional patent applications. Burcon’s portfolio includes pea, canola, soy, sunflower, hemp, and upcycled based proteins, for a combined TAM of ~\$40.0B. Each of these proteins have unique nutritional and functional value that can be used in a variety of consumable products including dairy foods, coffee creamers/whiteners, protein bars, vegetarian and vegan foods, ready-to-drink beverages, baked goods, and meat substitutes to name a few. Burcon is headquartered in Vancouver, BC and began trading on the Toronto Stock Exchange in 1999 under the ticker symbol “BU”.

### Exhibit 1: Burcon Protein Portfolio Overview

Source: Company Presentation

Given Burcon’s 20+ year history of plant protein innovation we believe that demand in the market is beginning to catch up to Burcon’s offerings. As the global demand for plant-based proteins continues, some protein sources stand to benefit more than others. We expect the Company to continue to innovate and capture new revenue streams in-line with this increasing demand through its Burcon 2.0 initiative. Burcon 2.0 is expected to be highlighted by control over the manufacturing process, a renewed focus on commercial validation, leading to additional revenue streams that go beyond the traditional royalty model.

We expect this to be spearheaded by the innovation in hempseed protein, as well as Canola protein, which is expected to scale in 2024 now that it has passed the initial proof point and initial commercialization, completed in 2Q25. We note the recent milestone of gaining control over the manufacturing process as the Company entered a strategic partnership to acquire a production facility.

### Exhibit 2: Burcon 2.0 Strategic Imperatives

Source: Company Presentation

## Product Lines

Burcon has a long history of developing plant protein ingredients as evidenced by its extensive patent portfolio. The Company differentiates its plant-based proteins via flavor, solubility, nutrition, and purity. With its extensive experience, the Company has demonstrated its ability to consistently develop neutral-flavored, highly soluble ingredients with high protein content.

Burcon's portfolio of products spans plant-based proteins from:

**Soy** – Soybean based proteins were the Company's first plant-based product. Soy proteins are currently in the test market phase of Burcon 2.0

as the Company works to qualify new markets and revenue streams to determine the best value capture model going forward. Burcon forecasts its opportunity in the soy market to be between \$79.0M to \$165.0M in USD, with an expected TAM of \$4.5B and 4.6% market CAGR.

**Pea** – Burcon's pea protein is one of the Company's legacy products that has been proven at commercial scale over the last 15 years. As of 3Q25, Burcon successfully launched their next-generation pea protein; Peazazz®. One of the prime benefits to pea proteins is that they can be produced from non-GMO sources and are not considered a major allergen. Pea proteins have reached commercial production, a key operational milestone for Burcon as it works to scale up and capture additional revenue streams. Burcon forecasts its opportunity in the pea market to be between \$70.0M to \$116.0M in USD, with an expected TAM of \$2.9B and 11.9% market CAGR.

**Canola** – Canola based proteins are produced from the byproducts of canola oil production. Canola meal is an abundant and inexpensive product that is currently sold mostly as animal feed but is approximately 35% protein. The Company has relaunched this product to positive feedback and is expected to begin commercial production and sales in 2H24. Canola proteins are currently in the test market phase of Burcon 2.0 as the Company has shortened the product development cycle and validated customer demand. In 3Q25, Burcon announced a collaboration with Puratos to pioneer new canola protein applications. Additionally, the Company launched Puratein® canola protein for egg replacement applications; and completed two separate contract research projects. Burcon forecasts its opportunity in the canola market to be between \$58.0M to \$96.0M in USD, with an expected TAM of \$2.2B and 7.8% market CAGR.

**Sunflower** – Sunflower based proteins are past the Company's pilot-scale. Sunflower proteins are attractive in part due to the wide availability of raw materials as well as the upcycle processing that yield multiple protein products, as compared to most plant-based products that only yield one product. Sunflower based proteins are still in the refine/optimize phase of Burcon 2.0. Burcon forecasts its opportunity in the sunflower market to be between \$215.0M to \$392.0M in USD, with an expected TAM of \$21.3B and 6.2% market CAGR.

**Hempseed** – Hempseed based proteins are one of the Company's newest product offerings, having become ready to scale up with over \$2.0M worth of customer interest in FY25. This product is the world's first high-purity hempseed protein isolate at 95%, as compared to hemp protein at 65%. With a neutral flavor, off-white color, and growth and processing in North America this product line began sales in the market in 1H24 on a capital-light model. Burcon forecasts its opportunity in the hempseed market to be between \$68.0M to \$113.0M in USD, with an expected TAM of \$6.4B and 6.2% market CAGR.

### Exhibit 3: Proprietary Plant Technology Platform

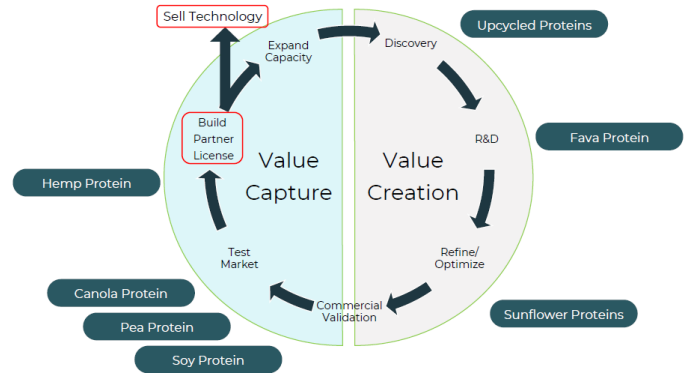

Source: Company Presentation

**Growth Drivers**

Growth drivers are led by the Burcon 2.0 initiative that is driven by best in class proteins and a go to market strategy based on a capital light model that opens new avenues for revenue capture. Historically the Company drove revenue via a royalty model where Burcon would develop products and earn royalties on those licensed products. Going forward Burcon 2.0 is expected to be more deliberate in its product development by gaining more control over the manufacturing process and by doing more commercial validation and market testing. This is expected to increase the value proposition that Burcon brings to its customers, thus allowing for the potential to partner with clients and/or sell the technology along with the option to pursue the traditional royalty model.

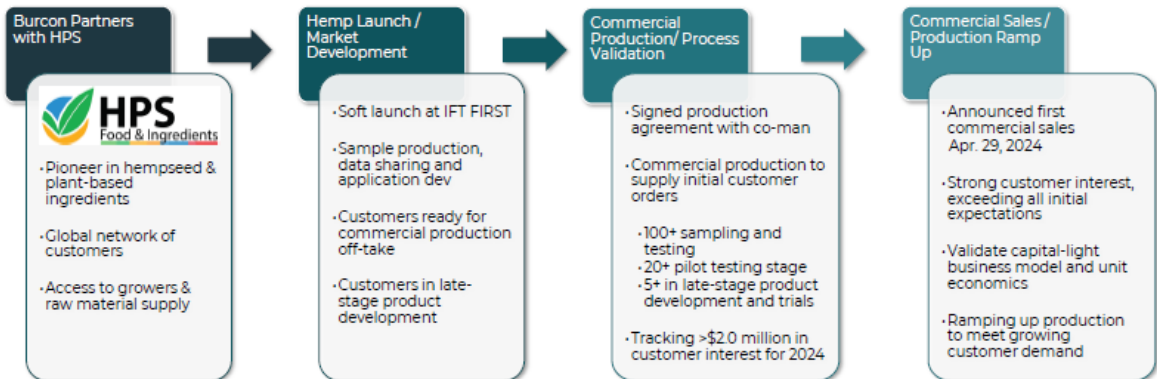

**Exhibit 4: Capital Light Business Model**

Source: Company Presentation

This is best exemplified by Burcons partnership with HPS Food and Ingredients. This partnership gives BU access to a global network of customers as well as access to growers and raw materials. This has led to ongoing production campaigns to meet the initial orders, allowing for a time to market that is between 9-18 months. With commercial sales announced in April of 2024, the next step for this project is increasing production to meet customer demand. We expect the Company to use a similar process for its sunflower based proteins.

**Exhibit 5: Hempseed Protein Roadmap**

Source: Company Presentation

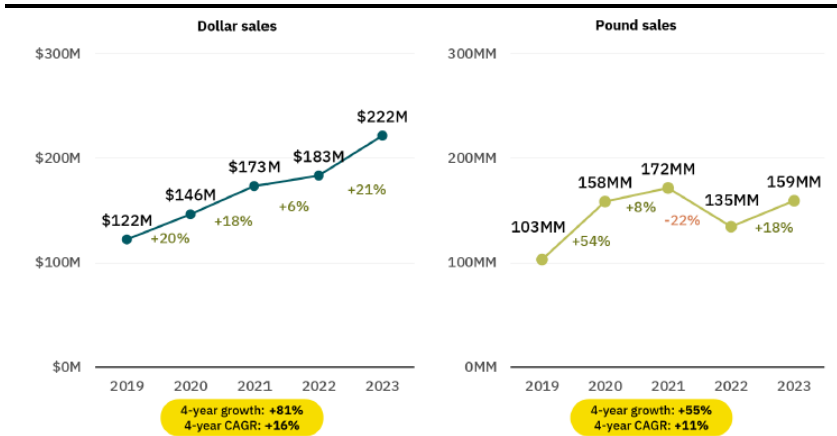

In 3Q25, Burcon Nutrascience announced a successful rights offering, which raised gross proceeds of \$9.43M, marking significant growth driver for the Company. This capital infusion boosted Burcon's pro-forma cash balance to approximately \$10.0M, providing a solid financial foundation to support its strategic initiatives for the next two years. The funds will primarily be used to commercialize and scale the production of Burcon's innovative plant-based protein products, as well as to fulfill obligations under the Manufacturing Agreement with ProMan. This enhanced financial position not only underscores investor confidence in Burcon's growth trajectory but also enables the company to seize upcoming market opportunities, drive product innovation, and achieve long-term profitability.

Market Overview

The plant protein market has seen drastic growth over the past several years as consumer habits have begun to change from consuming all their protein from meat-based sources to seeking out alternatives. Consumers originally shifted from traditional meat-based proteins due to concerns about the treatment of animals used to satisfy demand for meat and dairy products. However, the recent wave of demand in plant-based products has been from a younger generation that is focused on healthier eating habits and reducing environmental impacts. The rise of the vegan population is a key factor contributing to overall growth in plant protein demand as vegan diets tend to be higher in several nutritional categories such as potassium, Magnesium, and vitamins A, C, and E.

In addition to vegan and vegetarian consumers, there is also an increase in the number of consumers who are simply looking to supplement their protein consumption with a healthier, more sustainable alternative. These flexitarians are individuals that do not have specific dietary restrictions and do not entirely cut meat or dairy out of their diet, but instead make a conscious effort to replace some traditional

**Exhibit 6: U.S. Plant-Based Milk Market**

Source: Good Food Institute 2023 State of the Industry Report

proteins with plant proteins. In fact, according to a Numerator analysis, 38% of flexitarians said they purchase items for their nutritional benefits. Additionally, plant-based milk made up 15% of dollar milk sales in 2023 per GFI. We believe these are durable trends that complement the Company’s primary markets of dairy alternatives and plant-based beverages. These products are well suited to utilize the high protein content and mild flavors found in Burcon’s portfolio.

The overall plant-based protein market is anticipated to grow rapidly over the next few years with Markets and Markets projecting that the market will grow at a 14% CAGR to reach \$40.6B by 2025. The growth in the market is being driven not only by consumer preferences, but also by developments in technology that improve plant proteins taste and function for consumers. Improvements in the extraction and production of plant proteins are making consumers more open to trying plant-based proteins and meat substitutes.

## Risks

**Intense Competition** - Given the rise to plant-based protein popularity, the Company will face significant competition in these markets. Many of these competitors have much greater manufacturing capacity and financial backing. Burcon may need to invest additional capital into its current plant to match the capacity and costs of larger producers.

**Regulatory restrictions** - Burcon is governed by regulatory regimes that determine its ability to sell food ingredients in the United States and Canada. Burcon will need to obtain the necessary permitting and licensing to produce these ingredients and keep up with these regulations. Any change in the laws or the Company's inability to adhere to these regulations will inhibit the Company's ability to produce and sell its products.

**Patents and IP rights** - Burcon's success in generating further revenue depends on its ability to retain its intellectual property for its extraction of proteins. If Burcon is not able to protect its intellectual property through ruling of the courts or inability to retain the necessary counsel, revenue growth could be significantly reduced. In addition, costs associated with such litigation could reduce profits and cash flow.

**Dependent on agriculture yields** - Burcon's products are affected by crop yields and if crop yields decline in a certain season, those input costs would increase for the Company. Increases in these input costs would negatively affect profits or need to be passed on to the consumer.

## Valuation Summary

We are using a Discounted Cash Flow analysis to help arrive at a valuation range for Burcon. As Burcon is currently the only public pure play alternative protein manufacturer, multiple analysis is difficult. Furthermore, the Company has strong growth upside, which does not lend itself to the low steady growth of grain processors. Additionally, the Company is much smaller and more illiquid than most other food ingredient companies. We have included a comps analysis table to frame a range where Burcon could be trading when earnings and EBITDA become positive, however, as shown by our income statement forecast, we expect the Company to become cash flow positive before then which gives us the confidence needed to use a DCF analysis.

## IMPORTANT DISCLOSURES AND DISCLAIMER

- (a) The research analyst and/or a member of the analyst's household do not have a financial interest in the debt or equity securities of the subject company.
- (b) The research analyst responsible for the preparation of this report has not received compensation that is based upon Stonegate's investment banking revenues.
- (c) Stonegate or any affiliate have not managed or co-managed a public offering of securities for the subject company in the last twelve months, received investment banking compensation from the subject company in the last 12 months, nor expects or receive or intends or seek compensation for investment banking services from the subject company in the next three months.
- (d) Stonegate's equity affiliate, Stonegate Capital Partners, "SCP" has a contractual agreement with the subject company to provide research services, investor relations support, and investor outreach. SCP receives a monthly retainer for these non-investment banking services.
- (e) Stonegate or its affiliates do not beneficially own 1% or more of any class of common equity securities of the subject company.
- (f) Stonegate does not make a market in the subject company.
- (g) The research analyst has not received any compensation from the subject company in the previous 12 months.
- (h) Stonegate, the research analyst, or associated person of Stonegate with the ability to influence the content of the research report knows or has reason to know of any material conflicts of interest at the time of publication or distribution of the research report.
- (i) No employee of Stonegate has a position as an officer or director of the subject company.

**Ratings** - Stonegate does not provide ratings for the covered companies.

**Distribution of Ratings** - Stonegate does not provide ratings for covered companies.

**Price Chart** - Stonegate does not have, nor has previously had, a rating for its covered companies.

**Price Targets** - Stonegate does not provide price targets for its covered companies. However, Stonegate does provide valuation analysis.

### **Regulation Analyst Certification:**

I, Dave Storms, CFA, hereby certify that all views expressed in this report accurately reflect my personal views about the subject company or companies and its or their securities. I also certify that no part of my compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed in this report.
